

USE-CASE FLOW SPECIFICATION

Use Case ID: UC-02

Use Case Name: Place Book Hold

Primary Actor: Student Member

PRECONDITIONS

1. The Student Member is registered with the library.
2. The Student Member is authenticated in the system.
3. The requested book exists in the ISBN catalogue.
4. The library system is available.

POSTCONDITIONS

1. The hold request is successfully recorded.
2. If the book is currently loaned, the Student Member is added to the FIFO holding queue.
3. The Student Member's queue position is displayed.
4. The reservation information is stored in the system.

MAIN SUCCESS SCENARIO

1. Student Member searches for a book using its ISBN or catalogue information.
2. The system searches the ISBN repository.
3. The system displays the matching book details and availability status.
4. Student Member selects the required book.
5. Student Member selects "Place Book Hold".
6. The system checks the Student Member's eligibility.
7. The system checks the current availability status of the book.
8. Since the book is currently loaned, the system adds the Student Member to the FIFO holding queue.
9. The system calculates and assigns the Student Member's position in the queue.
10. The system displays a confirmation containing the book details and queue position.
11. The system stores the hold request successfully.
12. The use case ends successfully.

ALTERNATE FLOW — MEMBER NOT ELIGIBLE

6a. Member has reached the maximum allowed limit.

1. The system determines that the Student Member has reached the maximum permitted number of books/holds.
2. The system rejects the new hold request.
3. The system displays a message explaining that the maximum limit has been reached.
4. The system does not add the Student Member to the holding queue.
5. The use case ends without creating a reservation.
